Ergonomics & design in harmony

## Treston products used by customers

### Individual workstation equipment saves production space

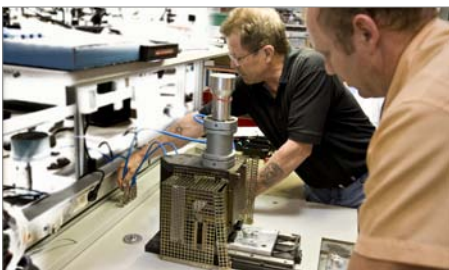

In order to save space and organise the work more efficiently, EBE GmbH had individual workstations with exchangeable worktop systems tailored by Treston. As several production steps can now be performed at one workstation due to the exchangeable worktops, the factory workers no longer need to go from bench to bench. Thanks to this solution and a double-workstation construction, today only 26 instead of previously 150 workbenches are required and the production space of previously 1,500 m<sup>2</sup> could be halved. This well-conceived workstation system not only allows for maximum flexibility but also saves a great deal of investment money.

*The lower worktop of the exchangeable worktop construction with rollers for easy insertion of the upper worktop incl. device*

*The double-workstation concept: there are two workstations on one workbench without confining the workers' elbowroom*

*Exchanging a worktop takes no longer than one minute*

Dear Customers and Prospective Customers,

With this issue, you hold the second European Newsletter in your hands. The response to our first joint version of all Treston subsidiaries in autumn 2009 was so overwhelming that we decided to continue it.

Some time ago, at an international trade fair in Germany, a prospective customer said that he "would rather buy the products of a German company", instead of those of a Finnish one with a subsidiary in Germany. Does this stance sound logical if the same person exports products worldwide?

These days, we have a joint understanding of quality in European industrial countries; and we can rightly be proud of the label "made in Europe".

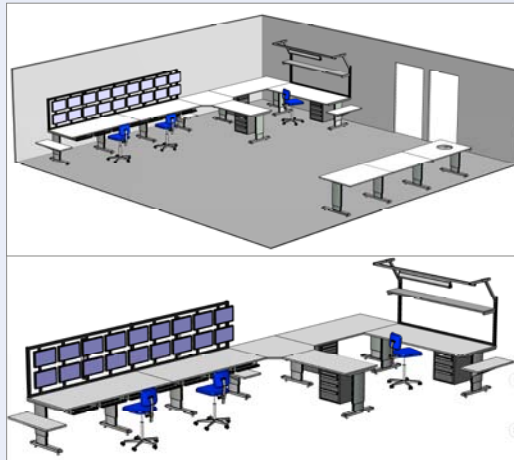

Yours

*Tapani Pöytäniemi*

**Special solution:  
 process monitoring station**

This process monitoring station has been developed for a technological process. Two plant operators monitor the current production data on several LCD screens. The solution includes seven pull out underdesk keyboard shelves as well as a small service station. Cable channels on the rear panel ensure a tidy appearance.

Are you looking for an individual solution? Get in touch with us or request our catalogue: perhaps we have already developed the product you need.

**Higher degree of concentration and ESD protection: ESD wall elements in various sizes**

Modern manufacturing and development environments, such as repair centres and other technical areas, are becoming more and more similar to classical offices. Our daily ambition is to meet in the best possible way the resulting requirements of ergonomics and perfect workplace conditions. For this reason, we have developed our ESD screen panels. Noise and annoying background noise can be reduced by an average of 7 to 9 decibels by means of the flexible screen elements. Due to the reduced noise level and increased privacy, the degree of concentration can be doubled - and this at a higher degree of ESD protection.

**30 days of product testing**

**Free of charge testing of the X30 from our new chair series "X".**

It has been designed by the worldwide esteemed designer Yrjö Kukkapuro, whose name stands for the excellent combination of design and ergonomics. Test the X30 - and you will want to keep it.
